

UKAS Accredited Foreign Body Identification

Horror stories concerning the discovery of foreign bodies in food are common. Everybody has had a bad experience or knows someone who has. The potential for damage to brand reputation is enormous, as is the potential for involvement in expensive litigation.

It is therefore essential that those involved in the food supply chain are able to respond quickly to every complaint with accurate information regarding the three main concerns:

1). What is it? 2). Where did it come from? 3). How did it get there?

For advice about your testing requirements for Foreign Bodies please contact us for an introductory call or a quote.
